

# PROTENT ROOFTOP

*No Boundaries*

## Installation and Care

Your tent must be properly mounted on top of vehicle or trailer by a competent person. Recommended installation on a solid roof rack or 3 load bars minimum. When travelling at speeds over 100kmh we recommend extra straps to ensure the tent is securely fastened.

When drilling the boards for mounting ensure that the tent is open to avoid drilling through the canvas.

Never drive with rooftop tent open, make sure the tent is properly secured for travel i.e. PVC cover securely fastened

Always check the mountings and nuts and bolts are securely fastened before any trip and periodically on long trips.

Never stand on the tent when closed. Never climb on the board in mid air without the ladder firmly in position.

For longevity remove your rooftop tent from the vehicle when not in use and store in a cool dry place of the floor.

Ensure your tent is completely dry before storing to prevent mould forming

## Tent & Frame assembly

1. Remove bag loosening cross straps and lifting over board taking care not to catch bag on the board corners.
2. Extend the ladder to its full length, lock in place and pull down on ladder in order to raise tent board.
3. Air needs to enter the tent when opening to avoid the vacuum effect.
4. The opened board is supported by the ladder on the ground. On soft ground it is recommended to place a piece of plank or similar to avoid the ladder sinking into the ground which could cause damage to the board.
5. Insert the springsteel rods in the sleeves on the board, 2 longer ones on the centre join. Hook the v shaped end into eyelets on flysheet to extend it.
6. Ensure you park on level ground and the the 2 aluminium sections are fully locked together in the centre of the boards when tent is open. Never leave children unattended in the tent.
7. The sidewall is attached by matching the zip on the wall to the zip on the tent. The height of the wall can be adjusted by removing the extension zip strip.
8. The inside wall has a large zip that allows access to your vehicle. The bottom of the walls are fixed to the ground at the PVC peg points.
